EDUCATION

G H Patel College of Engineering and Technology

2025 – 2029

B.Tech (Pursuing), Computer Science and Engineering | (3rd Semester) — CGPA: 7.6

Vadodara, Gujarat

EXPERIENCE

Development Intern at Gujarat Alkalies & Chemicals Limited (GACL)

June 2026 – July 2026

Role: Software Development Intern

Vadodara, Gujarat, India

- Built an end-to-end CV/OCR pipeline (OpenCV, PaddleOCR) for industrial HMI dashboard automation, achieving near-perfect text extraction and **~96% table reconstruction accuracy**.
- Engineered custom table reconstruction via grid detection, line regression, OCR coordinate alignment, and color-based segmentation to convert unstructured visual tables into structured data.
- Built an offline, IP camera-integrated data extraction system with automated capture and preprocessing (rotation correction, grayscale normalization) to meet industrial confidentiality requirements.

TECHNICAL SKILLS

Programming Languages: Python, JavaScript, C++, C

AI/ML & Computer Vision: Computer Vision (OpenCV), PaddleOCR, EasyOCR, LLM Integration & Orchestration, scikit-learn, spaCy, NumPy, Pandas, Matplotlib

Web Development: React, Next.js, FastAPI, Streamlit, Tailwind CSS, Vite, PyQt/PySide6, REST API Design

Databases & Backend: PostgreSQL, MySQL, Supabase, Electron,

Cloud & DevOps: Docker, Vercel, Git, GitHub, OAuth

Core Computer Science: Data Structures and Algorithms, Object-Oriented Programming, DBMS

PROJECTS [Ctrl + Click the Title to Open Link to project]

MinuteMind — AI Meeting Execution System | *Next.js, FastAPI, Python, Supabase, LLMs*

- Built an async FastAPI pipeline (team of 2) converting meeting transcripts into structured tasks via LLM orchestration and automated JSON validation.
- Reduced task tracking turnaround from 6 to 2 days (**66% reduction**) in pilot deployment using a Supabase-based lifecycle system with owner/deadline validation.

ALEX — Adaptive Logic Execution eXecutor | *Python, FastAPI, LLM Integration, PyQt/PySide6*

- Built an agentic AI system converting natural language into schema-validated, executable workflows via LLM integration.
- Engineered a secure function registry restricting execution to **30+ predefined actions**, ensuring deterministic, injection-safe intent-to-action execution.

Nexlyra — Productivity Browser | *Electron, JavaScript, Node.js*

- Built a keyboard-centric Electron browser with intent-based routing across URLs, search, and AI queries via a custom classification engine.
- Shipped a production Windows app with secure IPC/context isolation, native shortcuts, local-first storage, and a **~300MB memory footprint**.

ACHIEVEMENTS AND CERTIFICATIONS

- Build with the Claude API — Anthropic Academy
- HackerRank Certified Software Engineer
